Through our activity we connect supply and demand, North and South, East and West. We provide energy to the regions where it is needed, creating new links between people, companies, industries and states.

**TEK- ENERGO,000** has various partnerships & agreements with oil terminals located in the black sea area and exporting of fuel oil

We focus our transnational activity on the trading of refined petroleum products worldwide, orienting on small and middle sized ventures. The geography of our trading operations cover the markets of Europe, Middle East, CIS Countries and the Far East.

**LOGISTICS**: Freight of vessels and railway transportation is another direction of our activity - an area where we have many years of expertise. We are dedicated to offer excellent services for our clients chartering cross Black Sea. all types of vessels and maintaining.

**TEK –ENERGO,000** supplies barrels worldwide and have access to all the key crude grades.

Our global network of trading offices, ideally located in all the major oil trading regions, allows us to identify changing crude oil flows and evolving market dynamics. **TEK** captures value throughout the supply chain through its relationships with oil producers, superior logistics capabilities, and strategically located storage and blending facilities. Our experience and understanding of oil markets enables us to implement robust hedging programs in volatile environments.

**TEK**: source, store, and deliver cost-effective petroleum solutions to customers worldwide. Within the petroleum trading team, we have an active market presence in aromatics, primarily as a blending component. We have built up key relationships in many core-trading region of the world, including Russian companies, major refiners, and numerous downstream

partners. The majority of our customers are long-term partners. Many choose to renew and expand their business, based on our solid performance, bespoke customer service and fair pricing.

Our fuel oil trading team combines global presence, market knowledge and efficient logistics to connect producers and end-users. Our teams deploy interlocking skills. We develop relationships with power generators and bunker fuel traders. Traders monitor macro-economic and market-led patterns and trends. Analysts assess potential blending strategies. We optimise flows and blends to reflect changing patterns of demand. Currently, 41% of global fuel oil supply is used in bunkers, 33% in power generation and the remainder for refinery feedstock. We are increasing the low-sulphur portion of our portfolio in line with global trends.

**Freight** of vessels and railway transportation is another direction of our activity - an area where we have many years of expertise.

We are dedicated to offer excellent services for our clients chartering cross Black Sea all types of vessels and maintaining inland Russia and inland Europe transportation.

we seek to provide the transport and logistic services that our customers need. Our goal is to bring a solution even before the problem comes out.

Since we operate in the service industry, we are fully aware that in order to provide our customers with a cost effective and efficient service we have to complete our activity with an excellent transport and logistic service. This can be a real point of competitive differentiation.

We can take advantage of important partnership with a dedicated team, which has a multi-years experience in the transport and logistic sectors. We constantly work to develop a responsive, economical transportation network that makes us able to implement strategic decisions to reduce costs and increase customer service levels. Moreover, the latest development in technology allows to monitor, control and optimise transportation processes.

**TEK** has the privilege to cooperate directly with major Russian petroleum producers and is able to supply its clients via the main crude export routes starting from the Black Sea ports of Novorossiysk and Tuapse, the Baltic Sea port of Primorsk, ESPO terminal Kozmino, as well as the Czech Republic and Germany (via the Druzhba pipeline). The refined products are exported through the Black Sea and Azov ports Novorossiysk, Taman, Kavkaz, Rostov on Don; Baltic Sea ports Vysotsk, Primorsk, St. Petersburg, Ust-Luga and Kaliningrad in Russia, Vopak, Vesta and Alexela Oil Terminals in Estonia, Ventspils and Riga in Latvia and Klaipeda in Lithuania; Far East Basin sea ports Nakhodka and
